Education

University of California, Los Angeles - GPA: 3.8

Los Angeles, CA

B.A. in Computer Science, Linguistics — Minor in Data Science

Expected Graduation: June 2028

- **Coursework:** Data Structures and Algorithms, Object-Oriented Programming, Software Construction, Discrete Structures, Linear Algebra, Probability and Statistics, Linguistic Analysis, Applied Phonetics, Syntax

Technical Skills

Languages: Python, C/C++, Java, JavaScript/TypeScript, HTML/CSS, SQL

Technologies: Claude Code, Model Context Protocol, AI agents, FastAPI, Git, Docker, MongoDB, AWS

Work Experience

Sixth Street Partners

June 2026 – August 2026

Investment Software Engineer Intern | Python, FastAPI, Fargate, Airflow

New York, New York

- Built a **RAG pipeline** (Python, FastAPI, GPT-5) automating company underwriting/research for the direct lending team, adopted by 100+ analysts and cutting manual research by 10+ hours per analyst per week
- Engineered scheduled **Airflow** DAGs (Astro) on **AWS Fargate** to ingest company data from **PitchBook**, **SourceScrub**, etc. into **Snowflake**, powering the platform's downstream RAG and classification workflows
- Implemented **LLM-based classification** and similarity scoring of portfolio companies by industry, product, and market to surface comparable companies to a target, iterating with analysts on feedback
- Developed an **asyncio-concurrent LLM extraction pipeline** to crawl 5,000+ unstructured **Box** folders, parsing **PowerPoint** decks with schema-enforced output to backfill 1,000+ companies, deduped via fuzzy matching

Fox Corporation

February 2026 – April 2026

Software Cloud Engineer Intern | Python, Terraform, AWS, Vue.js, FastAPI, Docker

Los Angeles, CA

- Engineered automated service-intake platform to streamline cloud resource provisioning (e.g., AWS, GitHub), with **Okta** for identity management, **PostgreSQL** for request tracking, and **Jira API** for ticket automation
- Provisioned cloud infrastructure by scripting Terraform modules to deploy and manage **EC2 instances**, **VPCs**, and **load balancers**, reducing manual setup time and configuration errors

Greenpoint Financial

June 2025 – September 2025

Software Engineer Intern | Python, Playwright, Pandas, Openpyxl, Power BI

Rye, NY

- Built Pandas ETL pipelines to process 4 years of quarterly data from **5K+ banks (5M+ row output)**, computing financial performance ratios and creating Power BI dashboards for trend and competitiveness insights
- Reduced ETL processing time by **50%** via postfix formula evaluation, loop elimination, memory-efficient data structures, and resilient error handling (structured logging + quarantine) across **7 database schemas**

Creative Labs

March 2025 – June 2025

Software Developer Lead | React Native, Node.js, MongoDB, Firebase

Los Angeles, CA

- Led **6-dev Agile/Scrum team** to deliver an app for discovering, rating, and reviewing cafes, ran stand-ups, set code-review standards, and coordinated with UI/UX designers on **20+ Figma mockups**
- Designed **RESTful API** using supporting CRUD operations, advanced search, and retrieval of cafe metadata

Projects

Agentic Wallet | TypeScript, Cloudflare Workers, Durable Objects, MCP, Hono, React, Supabase

- Built a **Model Context Protocol (MCP)** server giving any AI agent a spend-capped wallet, exposing search services and pay tools that call data APIs and commerce (DoorDash, Uber, Amazon, etc.) through one endpoint
- Designed a pluggable payment rail issuing scoped virtual cards (**Lithic**) per purchase on **Cloudflare Workers + Durable Objects**, wrapping commerce MCP providers with a governance layer that blocks overspend in real time

AI Fitness Tracker | React, Flask, TensorFlow, Express, MongoDB, Gemini AI

- Built **AI fitness app** with real-time exercise feedback on pushups, plank, etc. using Google MoveNet Pose Estimator and **TensorFlow** to count repetitions and detect bad form by measuring angle thresholds
- Designed front-end with **React**, account login with **Flask + MongoDB**, and virtual coach with **Gemini AI API**

Rappr | LangChain, PostgreSQL, Llama Models, TypeScript, Next.js, Supabase

- Deployed Web3 music betting platform with **500+ signups** on **Vercel**, built with FastAPI and **Supabase**
- Engineered **LangChain-based data pipeline** ingesting Billboard Hot 100 API, Reddit, and other sources into **PostgreSQL**, leveraging the aggregated dataset as LLM context to generate predictive betting lines
